

The Problem

When taking notes on a film:

- ▶ I would provide no concrete indication of what point of the film I was referring to, which would require me to scrub through to find it.
- ▶ I would spend a lot of time searching my notes for observations on particular ideas (e.g. the use of colour).

The Solution

- ▶ oTranscribe – > allows you to take notes while watching a video with a timestamp. I am running the software myself on GitHub, ensuring its availability.
- ▶ A shell script to sort notes exported from oTranscribe into separate files based on their mention of the keywords: camera, character, colour, editing, lighting, narrative, sound, and/or theme.

oTranscribe Web Application

Input and Output of Shell Script

Steps to Run oTranscribe

- ▶ I downloaded oTranscribe's GitHub Repository.
- ▶ Using the files downloaded from the repository, I compiled a dist folder using NPM and Node.js.
- ▶ I installed Jekyll.
- ▶ I copied the contents of the compiled dist folder to a folder called docs and pushed this to my Hunt-Exercises repository on GitHub.
- ▶ I created index.md in my repository and within this file, created a link to the docs folder. I then selected that GitHub pages run off the master branch of my repository.
- ▶ This can be accessed with my entire proof of concept at <https://mq-foar705.github.io/Hunt-Exercises/>

[... back to steps](#)

The screenshot shows the oTranscribe web application interface. At the top, there is a navigation bar with the oTranscribe logo, playback controls (play, previous, next, speed), and links for Help and English. The main interface is divided into three vertical panels. The left panel contains a video player labeled "Video Window" and a section for "Time Stamps Inserting Using Command and J". The middle panel, labeled "Template", contains a "Guide For Taking Notes" section with instructions to start notes with key words like Colour, Lighting, Camera, Sound, Editing, Theme, Narrative, and Character. Below this is a list of notes with timestamps in brackets, such as "[05:57] Colour, character: Yellow ball of wool is introduced. Visually distinct from human characters and office." The right panel contains a sidebar with buttons for Import and Export, labeled "Import Button" and "Export Button" respectively. The interface is annotated with pink boxes and arrows pointing to these specific elements.

Command and J

Guide For Taking Notes:

In order to facilitate the sorting of these notes, start each note with one or more of these key words to indicate what the note is in reference to:

Colour

Lighting

Camera (Movement, Angle or Shot)

Sound

Editing

Theme

Narrative

Character

Template

[05:57] Colour, character: Yellow ball of wool is introduced. Visually distinct from human characters and office.

[07:30] Lighting: Following shots are lit more brightly than the preceding scenes in the film. Natural lighting, windows are clearly open.

[02:49] 02:49 Narrative, character: Purl visually alluded to in the 'failure' graph

[07:30] Colour, Character: Office now populated with coloured balls.

Shell Script

The below right is my shell script to sort a txt file exported from oTranscribe into eight separate txt files based on their mention of keywords. With the Film Name folder in a directory set up like the one in the image on the below left, run

```
bash code/organise_notes.sh data/Film_Notes.txt
```

```
# Script to sort notes in a txt file from oTranscribe into
separate txt files on the basis of their mention of
specific keywords
# Run this script with the filename of the notes as the
argument
# Usage: bash organise_notes.sh Film_Notes.txt
```

```
for keyword in colour lighting camera sound editing theme
narrative character
# Edit these words to search for different terms
#Editing the number of terms will result in test2.bats
failing.
```

```
do
grep -i $keyword $1 > Sorted_Notes/$keyword.txt
done
```

“Antu folder-brown.svg” by Fabián Alexis is licensed under CC BY-SA 3.0

Automated Testing

Requires the installation of bats-core

```
#!/usr/bin/env bats
```

```
@test "making sure there is a single file for the
script to be run on" {
  result="$(ls -l data/*.txt | wc -l)"
  [ "$result" -eq 1 ]
}
```

Ensures there is only one txt file in the Data folder for the script to be run on.
Usage: with Film Name as the working directory, run
/path to bats-core on your
computer/bats-core/bin/bats code/test.bats

```
#!/usr/bin/env bats
```

```
@test "making sure eight files were produced" {
  result="$(ls -l sorted_notes/*.txt | wc -l)"
  [ "$result" -eq 8 ]
}
```

Ensures there are eight txt files produced by the script in the Sorted_Notes folder.
Usage: with Film Name as the working directory, run
/path to bats-core on your
computer/bats-core/bin/bats code/test2.bats

05:57 Colour, character: Yellow ball of wool is introduced. Visually distinct from human characters and office.

07:30 Lighting: Following shots are lit more brightly than the preceding scenes of the film. Natural lighting, windows are clearly open.

02:49 Narrative, character: Purl visually alluded to in the 'failure' graph

07:30 Colour, Character: Office now populated with coloured balls.

04:10 Theme: Conformity

01:15 Camera: Low angle, POV shot

06:42 Camera: Long shot

01:29 Narrative, themes: line - 'did you see they hired a . . .?', Purl as a new experience of women

07:32 Editing: Montage

02:22 Narrative: Water cooler interaction

05:00 Camera: pan out

00:09 Sound: soundtrack, jazz music

01:21 Sound: change in tempo in the music, slower

01:58 Character, Narrative: Purl first feels uncomfortable/left out

04:02 Camera, editing: three zoom shots in succession

04:08 Sound, Narrative, Character: music overwhelms the visuals, moment of determination

05:00 Narrative, character: graph from 02:49 now reflects Purl in her new suit

05:27 Narrative: Purl is accepted

05:36 Camera: Low angle, POV shot

06:11 Narrative, theme, character: Purl wishes to please the group she has just accepted into

06:27 Camera, narrative: two successive zoom shots, Purl is deliberating

Input Into Script —————> Output Of Script

Some Concluding Points:

- ▶ My project addresses the collection as well as data processing & analysis stages of the research data lifecycle (Corti et al. 2014 17-18)
- ▶ It also exists within the intersection of 'the fields of Digital Humanities and Cinema & Media Studies (which) are an increasingly fruitful pairing' (deWaard 2016: n.p.)
- ▶ By allowing me to better organise my notes based on their content and have an associated timestamp with each of these, my tools will save me a lot of time.
